INFOMEDIX

Solutions for health across the enterprise

Backed by a solid track record delivering the Clinical Patient Folder (CPF) and other clinical and HIM modules to some of Australia's largest health enterprises, InfoMedix understands what is required to be a trusted provider of high-quality digitised solutions.

Leveraging our large user base, customers benefit from a product specifically designed to improve clinical, business and operational outcomes within Australian hospitals. We have been actively consulting with the Australian healthcare community since 2000 and have an unrivalled depth of experience.

Via our customers and interactions with government and other clinical system vendors, InfoMedix understands both local and international directions in health. This knowledge flows into our product roadmap and strategic direction. InfoMedix works within the NEHTA framework and complies with national and state standards and policy for scanning, integration, privacy, security, record destruction and record keeping.

Clinical benefits

- Patient record access anywhere, anytime
- Workflow management of patient information across the health continuum
- Real time data capture and transformation at the point of care
- Wholistic view of the patient record

HIS benefits

- Control and reduction of the volumes of paper across the health enterprise
- Departmental transformation from handling manual paper to automated digitisation
- Coding efficiencies enables smarter work management practices
- Fully flexible solution for HIS departmental workflow

Operational benefits

- Reduced clinical risk results in increased clinician satisfaction and patient safety
- Efficient coding practices result in faster and more accurate revenue generation
- Paper reduction results in:
  - reutilisation of floor space
  - reduction of OH&S risks
  - reduction of consumables &
  - redeployment of staff within a digitised HIS
- Overall efficiencies equal appropriate care

Providing you with a single view of the patient record

Used by thousands of **HIMs and Clinicians**

Integrated with **over 30 different clinical systems**

10,000 beds across 100 sites Australia-wide

Over **100 million documents** stored since 2000

Integration

- Deep integration with EMRs and portal-like systems
- Additional information from other clinical systems in the patient record means a more complete patient record

Forms management

- End-to-end management including: artwork; forms designer; forms submission and approval workflow
- Re-use and reporting on forms data

Personalisation

- Highly configurable to enable clinicians to personalise preferences
- Filters, bookmarks, patient lists, and virtual sections all enable easier and faster access to patient information

Workflow and messaging

- Intelligent workflow to enable the management and triage of work tasks such as e-referrals and coding
- Integration with secure messaging modes

Reliability and availability

- Flexible typographies available for high-reliability and availability
- Local support means faster resolution to issues and on-site attendance if required
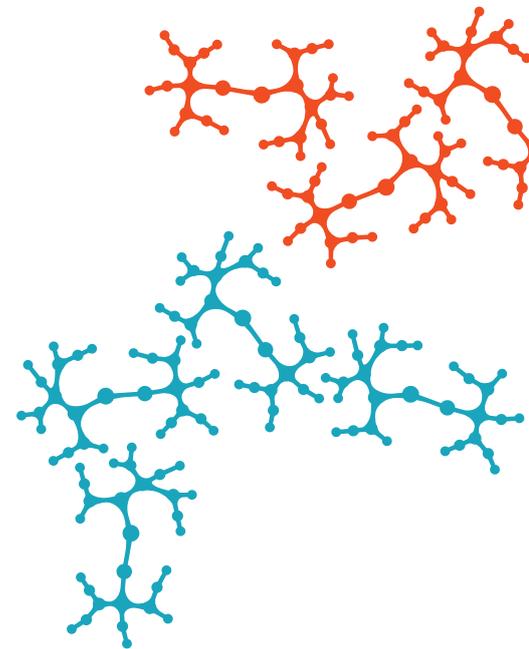

Innovation

- Rich integration with scanning technology enables flexible scanning models and OCR capture
- Windows 8 mobile application
- InfoMedix Cloud Services (ICS)

Who we are

InfoMedix has a proven track record in the delivery of products and services for information integration in the healthcare industry. Our CPF is by far the most widely used medical records scanning system in Australia today.

Our system is recognised as a logical step towards a full Electronic Medical Record. Irrespective of the native system, it is the portal into all patient information including e-referrals, patient results and outcomes and discharge summaries.

Our expert team consists of qualified and experienced health information managers, clinicians, health software developers and implementation specialists, and business professionals who are passionate about improving health outcomes for all Australians.
